

5. Blockhouse Point

Shoreline length: 6 km

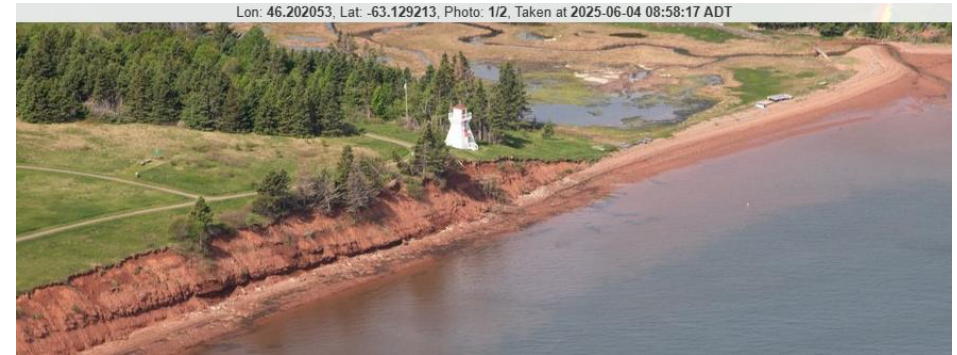

Shore Types

Blockhouse Point is an exposed headland located on the southeast end of PEI. Shore type characterized by a majority of cliffs.

% Shore types within SMU

low plain	bluff	sloped armour	cliff	wetland	vertical struct.	dunes	sandspit
20	6	0	58	16	0	0	0

Blockhouse Point Lighthouse

Governance, Infrastructure, and Economy

This area is located entirely within the Rural Municipality of West River. Route 19 is the only significant infrastructure noted.

Natural Assets and Heritage

There are no Provincial or Federal Parks nor Wildlife Management Areas in Blockhouse Point. However, the area includes Skmaqñ-Port-la-Joye Fort Amherst National Historic Site and its hiking trails as well as Blockhouse Point Lighthouse. The whole shoreline includes critical habitat for bird species including the threatened Bank Swallow.

Planning and Policy Framework

West River has municipal planning authority, applying a hard Environmental Risk zone that includes watercourses and wetlands plus 15m and the 2100 coastal floodplain, as well as other hazard areas. All building setbacks are measured from the zone boundary. Coastal setbacks are based on standard buffers plus setbacks, or 60× the annual rate of erosion where applicable. A vertical setback is included, based on the 2100 coastal floodplain.

Sediment transport

The estimated net sediment transport rate averaged across the SMU is moderate, with prevailing net direction towards the north.

Coastal Flood and Erosion Risk

Due to the very limited amount of infrastructure, flooding and erosion risks are low. The following flood risk indicator is based on the even with 1% annual exceedance probability (100-year return) with increasing amounts of sea level rise (SLR). The erosion risk indicator is based on potential future shoreline change for areas with historical data, not including salt marshes.

Estimated number of buildings and length of road at risk [per km shoreline].

	FLOOD RISK				EROSION RISK		
	Present	Short-term 0.3m SLR (2050)	Medium-term 0.6m SLR (2080)	Long-term 1.2m SLR (2130)	Short-term (~2050)	Medium-term (~2080)	Long-term (~2130)
Buildings	0	0	0	0	0	0	2 [<1/km]
Roads	0	0	0	0	0	1 m [0 m/km]	41 m [7 m/km]

Proposed SMP Strategies

	Short-term	Medium-term	Long-term
Sea level rise range	0 – 0.3 m	0.3 – 0.6 m	0.6 – 1.2 m
Potential timeframe	2030 - 2050	2050 - 2080	2080 - 2130
5.00 Blockhouse Point	NAI	NAI	MR
Rationale	The primary strategy is No Active Intervention followed by long-term managed realignment of the limited at-risk assets along eroding cliffs, notably for the Lighthouse and hiking trails.		

The table above shows how the recommended shoreline management unit (SMU) or policy unit (PU) strategy evolves across three planning epochs (Short-, Medium-, and Long-term) under increasing sea-level rise and erosion projections.

Adaptation strategies are preliminary recommendations subject to further development with feedback from community and government. These strategies are not approvals, commitments or policy determinations.
