

North River

Shoreline length: 34 km

Shore Types

North River is an estuary along the west side of Charlottetown with a majority of wetlands.

Governance, Infrastructure, and Economy

This area is fully incorporated, including shoreline segments of Charlottetown, Miltonvale Park, Warren Grove, and Cornwall.

Key infrastructure includes the TCH North River Causeway, a critical transportation link to Charlottetown, along with York Point Road (Route 248, at MacEwan and Howards Creeks); sewage treatment lagoons at North River (on the edge of the flood zone); North York River Road at Mill Road (near Milton Station); the Confederation Trail at the headwaters of the North River; Miltonvale Community Park; and Beachview Home off Beach Cove Road (housing for vulnerable people).

Wastewater treatment plant lagoons and Heritage Drive

Armoured properties off York Point Rd next to undeveloped lots

Significant economic development is located at the North River causeway, including the Cows Creamery and Milky Way tourism

businesses. Legacy land use constraints include some areas with small or undersized lots, some unpaved private roads, and undeveloped small-lot subdivisions.

Natural Assets and Heritage

Recreational and natural sites include two community parks, Upton Farmlands Park, and the Beach Grove Natural Area, along with Beach Grove Nature Trails, Windsor Park (basketball, playground), Miltonvale Community Park (playground, tennis and pickleball courts, ballfields), and Upton Farmlands (dog park).

Planning and Policy Framework

Four municipalities share planning authority over this SMU.

Charlottetown has municipal planning authority. Building setbacks are measured from the edge of the buffer, with some exceptions. Some vertical setbacks apply in tidal waterfronts. A draft bylaw currently under development would add further guidance to managing development in hazard areas. Miltonvale Park has municipal planning authority, applying an Environmental Reserve Overlay that includes wetlands, watercourses, and buffer zones, with an additional lot setback required for buildings. Coastal hazard assessments are required, and there are building restrictions within a certain elevation (vertical setback) based on the 2100 coastal floodplain. Warren Grove has municipal planning authority, using the Province's 75ft setback from embankments or the high water mark. No coastal flood elevations or erosion-related provisions have been established, and there is no specific zone for environmental hazard areas. Cornwall has municipal planning authority, applying an Environmental Reserve Overlay zone (O2) that includes watercourses and wetlands plus a 15m buffer; the minimum setback is the greater of 15m or 60× the annual erosion rate,

where applicable. An additional lot setback is also required. A vertical setback is included, based on the 2100 coastal floodplain.

Coastal Flood and Erosion Risk

Coastal flooding is the prevailing hazard for the area. The following flood risk indicator is based on the even with 1% annual exceedance probability (100-year return) with increasing amounts of sea level rise (SLR). The erosion risk indicator is based on potential shoreline change or salt marsh migration to future time horizons.

Number of at-risk buildings [N. per km shoreline]

	Present	0.3m SLR (2050)	0.6m SLR (2080)	1.2m SLR (2130)
SMU North River				
Flood risk	5 [<1/km]	8 [<1/km]	9 [<1/km]	17 [1/km]
Erosion risk	NA	12 [<1/km]	15 [<1/km]	26 [1/km]
PU North River Bridge				
Flood risk	2 [1/km]	4 [1/km]	4 [1/km]	4 [1/km]
Erosion risk	NA	11 [4/km]	11 [4/km]	14 [5/km]

Sediment transport - Sediment transport rates and associated downdrift risk across the SMU are low.

Proposed SMP Strategies

The primary strategy for North River is No Active Intervention until risk levels in limited areas warrant MR.

	Short-term	Medium-term	Long-term
Sea level rise range	0 – 0.3 m	0.3 – 0.6 m	0.6 – 1.2 m
Potential timeframe	2030 - 2050	2050 - 2080	2080 - 2130
Proposed SMU strategy	NAI	MR	MR
Rationale	The local shoreline and hazard zone should remain natural, undeveloped until risk levels in limited areas warrant MR.		
Proposed PU strategy			
North River Bridge	R	R	R
Rationale	Resist strategy is warranted for critical highway infrastructure.
